

E85 is all about renewability.

E85 is a blend of 85% ethanol, 15% gasoline developed for use in flex-fuel vehicles

(FFVs). This high octane, high performance fuel is clean and environmentally friendly - reducing harmful hydrocarbon and greenhouse gas emissions. Choosing ethanol reduces

America's dependence on foreign crude oil and gasoline imports.

Today's ethanol is just the first generation of biofuels. There are even better things to come.

Here's what E85 can do for you:

- Increased horsepower. E85 is a higher octane, cleaner burning fuel than gasoline.
- Provides support for domestically-sourced fuels and enhanced energy security.
- Reduces greenhouse gas emissions. The U.S. Department of Energy reports that ethanol produced from corn, on a life-cycle basis, results in significant reduction in greenhouse gases.

It fuels millions of vehicles.

There are more than seven million FFVs on the roads today: including compacts, sedans, minivans, trucks and SUVs. A flex-fuel vehicle can operate on any blend of ethanol up to 85%, or on unleaded gasoline.

E85 is for use only in flex-fuel vehicles (FFVs) that are designed for it. Before you fill the tank, be sure to look for an exterior FFV badge, yellow gas cap, or look in your owner's manual.

Where can you find E85 fuel?

There are more than 2,000 retail stations offering E85 across the country. There's probably one closer than you realize. Visit our website to find the station nearest you.

For more information on E85, visit www.ethanolrfa.org

Choose your energy future.
